OF
FOOD SERVICE EQUIPMENT

NATIONAL SANITATION FOUNDATION
TESTING LABORATORY

JANUARY 1, 1968
ANN ARBOR, MICHIGAN

EF 002 092

Annual authorization to display the nSf Seal on equipment is granted only when, following laboratory and plant evaluation, the equipment is found to be in compliance with the adopted NSF Standards, Basic or Special Criteria.

Plant and laboratory evaluations are conducted annually, thereby providing assurance that Listed equipment complies on a continuing basis with the NSF Standards and Criteria. Equipment evaluations are conducted jointly with official health agency personnel whenever possible in order to achieve a better understanding and relationship between industry, public health and the Foundation.

Equipment bearing the nSf Seal should conform in all respects to the established Standards or Criteria.

Official health agencies are encouraged to periodically assure themselves that equipment, in their locale, does meet these requirements.

The nSf Seal and Listing Program has been developed and maintained to assist the professional public health worker and industry in achieving a common goal-that of affording the public, the safeguards necessary for the protection of their health.

HISTORY AND PURPOSE

OF THE

NATIONAL SANITATION FOUNDATION

In 1944, a small group of industrial and public health leaders were discussing mutual problems involving sanitation. They realized that more solutions to modern sanitation problems affecting industry and the public health could be developed through mutual understanding and cooperative action than through ordinances, inspections and law enforcement alone.

It occurred to them that great strides could result from the creation of an independent but authoritative liaison organization which would be a clearing house through which business and industry and health authorities could work together for the solution of their common problems and for the common good.

They foresaw that, through such an organization, they could jointly seek new facts in sanitary science to bring it up to date with technological advances of industry and with modern problems of the health officer in the field.

They could sponsor educational programs and sanitation services which would win everyone's cooperation in a nationwide program designed to promote superior sanitation in modern products and services, and in the daily lives of the people.

Thus was born the National Sanitation Foundation.

The Foundation is a non-profit, non-commercial organization seeking solutions to all problems involving the environment. It is dedicated to the prevention of illness, the promotion of health, and the enrichment of the quality of American living through improvement of the environment.

Distinguished representatives of the public health profession, of business and industry, and of the public serve on its Board of Trustees, Council of Public Health Consultants, Industrial Advisory Board and various committees.

The National Sanitation Foundation fulfills the important purpose of arranging for a common meeting ground where industry and public health may discuss and solve common problems. In 1948 the first National Sanitation Foundation clinic was held at the Headquarters of the Foundation in Ann Arbor for the purpose of charting the course which the Foundation would follow. Five specific recommendations, outlined herein, came out of the 1948 clinic on which the National Sanitation Foundation has attempted to develop its program.

1. BASIC RESEARCH: The need for an enlarged research program in the field of sanitation was recognized by the clinic as pressing. Some of the research programs in which the National Sanitation Foundation has engaged, with the support of industry and public health, since 1948 include dishwashing studies, research on the cleanability of surfaces, automatic clothes washer studies, plastic pipe for potable water uses, accelerated material and finish testing and evaluation, and many others.

2. STANDARDS: The need for uniform equipment standards was pointed out by both industry and public health groups. Eleven National Sanitation Foundation sanitation Standards and two Criteria have been developed relating to food equipment, and products complying with the provisions of these Standards are Listed herein.

3. TESTING LABORATORY: The need for an independent testing laboratory where sanitation methods, materials and equipment may be evaluated objectively has been expressed many times by industry and public health. The 1948 clinic emphasized that such a laboratory where tests may be made and, when merited, approval given will serve as a valuable contribution to the improvement of sanitation throughout the country. The National Sanitation Foundation Testing Laboratory was established in 1952 and is available to serve industry and public health sanitation interests.

4. SEAL OF IDENTIFICATION: A Seal or some means of identifying items of equipment or devices meeting high standards of sanitary significance was specified, by the clinic to be an urgent need. Following the establishment of the National Sanitation Foundation Testing Laboratory, an official nSf Seal was adopted and may be authorized for use by industry, on equipment found to conform with National Sanitation Foundation Standards. The manufacturers Listed in this publication have been authorized by the Board of Directors of the National Sanitation Foundation Testing Laboratory to use the National Sanitation Foundation Testing Laboratory Seal on equipment complying with published Standards.

5. EDUCATION: Only through an adequate program of Education is it possible to distribute the results or products of research to public health, business and the public. The development of effective means of education calls for research and wide spread tests of methods and materials. A continuing program in the development of materials has been and is one of the main efforts of the Foundation.

In these five important areas the National Sanitation Foundation will strive to continue serving industry and public health in making a better environment for all people.

WHAT IS THE NATIONAL SANITATION FOUNDATION?

It is a non-commercial, non-profit making organization seeking solutions to all problems involving the environment. It is dedicated to the prevention of illness and the improvement of quality of living through a better environment. It sponsors or conducts objective research to find improved sanitation methods and to determine facts. These studies are clearing up uncertainties regarding what is detrimental to health. They are providing an authoritative basis for the establishment of minimum sanitation standards for equipment, products, and devices that are generally acceptable to health authorities. It maintains regular contacts with health workers throughout the nation to learn their needs for studies, and to keep them informed of the Foundation's findings.

WHAT IS THE NATIONAL SANITATION FOUNDATION TESTING LABORATORY?

The National Sanitation Foundation Testing Laboratory is a separate non-profit corporation established to carry on research in the field of sanitation and is wholly owned by the National Sanitation Foundation. It also conducts regular inspections and periodic testing of products of manufacturing plants authorized by its Board of Trustees to use the nSf Seal. This is for the purpose of determining that the devices or products to which the nSf Seal has been attached meet either the applicable National Sanitation Foundation Standard or the standard set by the special testing of any product or device to which the application of the Seal has been approved following such testing. The Testing Laboratory is authorized to make charges for services rendered. Such charges are designed to cover operating costs.

HOW MAY A MANUFACTURER APPLY FOR THE USE OF THE NATIONAL SANITATION FOUNDATION TESTING LABORATORY SEAL AND FOR LISTING?

1. A manufacturer, who is convinced that equipment being constructed by his company is covered by one of the published National Sanitation Foundation Standards, and that such equipment is being, or can be, fabricated in conformity with the applicable Standard, may write to the Executive Director of the National Sanitation Foundation Testing Laboratory Headquarters, 2355 West Stadium Blvd., Ann Arbor, Michigan, making application for inspection of his fabrication facilities and equipment in various stages of construction.

2. The cost of the testing and examination of equipment and fabrication facilities will be in accordance with the Policy Statement Governing the Use of nSf Seals of the National Sanitation Foundation Testing Laboratory. Such charges are nominal and are designed to cover the cost of operation and "listing" Services.

3. If the results of the testing and examination of equipment and fabrication facilities are favorable, and the construction of equipment can be expected to conform to the National Sanitation Foundation Standards, a report will be submitted to the Board of Directors of the National Sanitation Foundation Testing Laboratory. This Board will be requested to act authorizing the use of the nSf Seal by the "listed" manufacturer under the usual terms.

4. The terms under which the right to use the nSf Seal is awarded require at least annual inspection of the manufacturing plant and annual re-inspection of equipment for compliance with the published Standards at nominal stipulated cost. Continued use of the nSf Seal depends upon continued maintenance of conformity with the applicable Standard.

HOW MAY A MANUFACTURER SUBMIT A DEVICE OR PRODUCT FOR TESTING?

1. A manufacturer who is convinced that he has a device or product of special value in the protection of health and general improvement of sanitation and who wants supporting evidence or desires "Listing" should write to the Executive Director of the National Sanitation Foundation Testing Laboratory, Headquarters, 2355 West Stadium Boulevard, Ann Arbor, Michigan, giving full details about his device or products and its applications. This should be accompanied by such evidence as he may have as to its specific value. He may request an estimate on the cost of testing the product with a view to securing the right to use the nSf Seal.

2. If the Executive Director of the National Sanitation Foundation Testing Laboratory is convinced that the device or product has practical applications in the sanitation field and may prove to have merit, he will prepare a plan or protocol for testing and submit it to the National Sanitation Foundation Joint Committee on Food Equipment Standards or to a special committee if the device or product is in some special field.

3. When such committee has approved this protocol as submitted or as amended, the National Sanitation Foundation Testing Laboratory will prepare an estimate of the cost of testing and enter into a contract for such testing if the manufacturer desires.

4. Payment for the testing is required before the work is started.

5. Following completion of the testing, a written report will be prepared and submitted to the appropriate committee for comment and review. Further testing may be necessary.

6. In the event that the committee determines that the results of the tests do not show that the device or product can be depended upon to accomplish its intended purpose, the report will be submitted to the manufacturer and given no further publicity. In entering into a contract for testing, the manufacturer should fully understand that favorable results can neither be anticipated nor guaranteed and that his expenditure for testing may serve him no useful purpose.

7. If the results of the testing are considered to be favorable by the committee, the report will in turn be submitted to the Council of Public Health Consultants. If they consider the results of the testing to be satisfactory. this will be reported to the Board of Directors of the National Sanitation Foundation Testing Laboratory. This Board will be requested to act authorizing the use of the nSf Seal on such device or product under the usual terms.

8. The terms under which the right to use the nSf Seal is awarded require at least annual inspection of the manufacturing plant and annual re-inspection of the device or product all at nominal stipulated cost. Continued use of the nSf Seal depends upon continued maintenance of the standard set for such device or product as a result of the testing.

LISTING POLICY

This list is subject to changes as new models supplant presently listed equipment and as new models are tested and Listed for use of the National Sanitation Foundation Testing Laboratory "Seal".

Information as to items of equipment withdrawn from Listing or as to manufacturers whose right to use the nSf Seal may have been revoked, may be secured by writing to the Headquarters of the National Sanitation Foundation Testing Laboratory.

The nSf Seal on equipment is not intended to indicate approval of the final installation or use application of the equipment. Installation and/or use application of nSf Listed equipment should conform with local and state regulations.

A revised Listing is published each year.

4-Compartment Sink with Integral Drainboard
Model 66

ALLMETAL FOOD EQUIPMENT CORP.
1050 BRISTOL ROAD
MOUNTAINSIDE, NEW JERSEY 07092

Wall Pastry Case
3' through 6'

Exhaust Units

Wall Mounted	Floor Model
WM-42 through WM-120	FM-48-23 through FM-120-23

Down-Draft
DD-48 through DD-120

Refrigerated Equipment Stands; Self-Contained & Remote Base Only
Models E-58-23 through E-94-30

(The letters "UD" following the model number indicates the units come equipped with an Updraft exhaust superstructure. The letter "S" following the model number indicates the unit is Self-contained.)

Salad Dessert Cases
With Water Station; Remote & Self-contained
Models 1235-23 through 2236-30

(The letter "S" after the model number indicates the unit is self-contained.)

No Water Station
Remote & Self-contained
Models 1214-23 through 2216-30

(The letter "S" after the model number indicates the unit is Self-contained. Numbers indicate type of superstructure, length-depth.)

Pie Storage Cabinets
Models PS-14-23 through PS-28-30
Numbers indicate length & width

Refrigerated Wall Bases; Remote & Self-contained
Hi-Boy Models 564-18 through 5610-30
Lo-Boy Models 454-23 through 4510-30

Equipment Stands
With Open Shelves - Fryer recess
Models A-48-23 through A-120-30
Models B-48-23 through B-120-30 w/fryer recess & drawers in base

Equipment Stands
Models C-48-23 through C-120-30 = with open shelves
Models D-48-23 through D-120-30 = with drawers

(Numbers indicate lengths & widths. The letter "UD" after the model numbers indicate that unit comes with updraft system.)

Sandwich Units; Remote & Self-contained
Models 373-23 through 376-30 w/toaster space & bread drawers
(Kingston type) Lengths 3'0" through 6'0"; Widths 23" through 30".

Models 342-23 through 346-30 completely refrigerated (Florham type) Lengths 2'0" through 6'0"; Widths 23" through 30".

(The letter "S" following the model number indicates that the unit is Self-contained.)

Compressor Enclosures
Models CD, CS, CC = Lengths 18' through 24"; Widths 23" through 30"

Lowerator Stands
Models LS-12-23 through LS-60-30
Lengths 12" through 60";
Widths 23" through 30"

Steam Tables
Models S-36-23 through S-72-30
Lengths 36" through 72";
Widths 23" through 30"
Letters following the model number indicate:
EW - Electric Wet Bath
GW - Gas Wet Bath
GD - Gas Dry Heat
ED - Electric Dry Heat

Bread & Roll Cabinets - s/s top
Models 612-ST-23 through 672-ST-30
The letters "MT" in place of "ST" indicate the unit comes with maple top in place of s/s top.

Refrigerated Short Order Bases; Remote & Self-contained
Models L-48-23, L-48-26 1/2, L-48-30;
L-72-23, L-72-26 1/2,
L-72-30 with water station
Models M-48-23, M-48-26 1/2, M-48-30;
M-72-23, M-72-26 1/2,
M-72-30 without water station

Only basic model numbers are Listed. Modifications of basic Listed units indicated by prefixed or suffixed letters or numbers are considered to be included in this Listing.

Utility Stands
Models 824-23 through 896-30 = open base
824-DR-23 through 896-DR-30 = with drawers in lower base
824-SW-23 through 896-SW-30 = swinging doors
824-SL-23 through 896-SL-30 = sliding doors in base

Coffee Urn Stands
Models 724-23 through 772-30 = open base
724-DR through 772-DR-30 = with drawers in base
724-SL through 772-SL-30 = with sliding doors in base
724-SW through 772-SW-30 = swinging doors in base

Soda Fountain - Creamers
Models FC-60-26 1/2
FC-72-26 1/2
FC-66-30
FC-78-30

(The letter "S" following the model number indicates the unit is self-contained.)

Soda Fountain - Bobtails
Models FB-36-26 1/2
FB-36-30
FB-66-30

Ice Cream Cabinets
Models IC-18-26 1/2 through IC-78-26 1/2
IC-18-30 through IC-78-30

Soda Fountain - Bobtail - Creamers
Models FBC-54-26 1/2
FBC-54-30

Soda Fountain Bobtail - Sinks (without drainboards)
Models FBS-72-16 1/2
FBS-72-30
SI-36-26 1/2
SI-36-30

(The letter "S" following the model number indicates the unit is self contained.)

(The letter "CO" in front of any model number indicates the unit has laminated (color) plastic in front.)

Water Stations
Models WI-12-23 through WI-36-30
WS-12-23S through WS-36-30S

BARDEAU, LTD.

Single Tank Conveyor Type	CA2M	150	20 x 20	27		8	250			7.0	420	6			
Multiple Tank Conveyor Type	CA2	387	20 x 20	27	27	8	250	258		4.75①	285	12.9			

①Make-up water for wash tank is provided from final rinse source of supply. Sizing of water heaters should be based upon this additional demand. (Not to exceed 2GPM.)

AMERICAN DISH SERVICE, INC.
2940 FAIRMOUNT
KANSAS CITY, MISSOURI 64108

Type Dishwasher	Model No.	Operating Capacity Rack or Dishes per hr.	Rack Size or conv. width (in.)	Tank Cap. (gal.)			Pump Capacity Gallons/Minute			Final Rinse at 20 psi flow		Chemical Sanitizer required	Time of Operation All Stationary Rack Machines (Seconds)		
				Wash	Power Rinse	Pre-Wash	Wash	Power Rinse	Pre-Wash	Flow gpm	Usage gph.		Wash	Rinse	Dwell
Single Tank Stationary Rack	A	28	20 x 20	1.7	1.7		47.5			47.5①	47②	Available chlorine 50 ppm	70	38	12

① Recirculated pumped rinse minimum 50 ppm available chlorine.
② Total water demand 1.9 gallon per complete Wash, Rinse cycle at 120°F.

AUTO-CHLOR SYSTEM, INC.
746 POPLAR AVENUE
MEMPHIS, TENNESSEE 38105

Type Dishwasher	Model No.	Operating Capacity Rack or Dishes per hr.	Rack Size or conv. width (in.)	Tank Cap. (gal.)			Pump Capacity Gallons/Minute			Final Rinse at 20 psi flow		Chemical Sanitizer Required	Time of Operation All Stationary Rack Machines (Seconds)		
				Wash	Power Rinse	Pre-Wash	Wash	Power Rinse	Pre-Wash	Flow gpm	Usage gph.		Wash	Rinse	Dwell
Single Tank Door Type	A	28	20 x 20	2.5			48			*48 Pumped	**70	Available chlorine 50 ppm	68	36	16
Single Tank Door Type	A-2	28	20 x 20	2.5			48			*48 Pumped	**70	Available chlorine 50 ppm	68	36	16
Single Tank Door Type	A-3	28	20 x 20	2.5			48			*48 Pumped	**70	Available chlorine 50 ppm	68	36	16

* Recirculated pumped rinse minimum 50 ppm available chlorine.
** Total water demands 2.5 gallon per complete wash, rinse cycle at 120°F.

All machines listed leg mounted or on pedestal base.

① Make-up water for wash tank is provided from final rinse supply. Sizing of water heaters should be based on this additional demand. (Not to exceed 2GPM).

② Asterisks in model numbers of UC machines represent 2 digits which denote length of overall unit in feet.

③ Engineering data pertaining to rackless conveyor machines (Models UC**C Series 5' center section through UC**CW Series 8' center section) also applies to certain variations of these models for which National Sanitation Foundation Listing is authorized. Such variations are limited to the providing of soiled dish (loading) or clean dish (unloading) sections of non-standard length. The pump section(s), final rinse section, conveyor width and maximum conveyor speed must remain unchanged.

① Make-up water for wash tank is provided from final rinse source of supply. Sizing of water heaters should be based on this additional demand. (Not to exceed 2GPM).

② The conveyor tables used in connection with this model are not fabricated by the dishwashing manufacturer and should not be considered in compliance with Standard No. 2, unless such authorization has been extended to the manufacturer of the dish tables.

③ Engineering data pertaining to rackless conveyor machines (Models FT200 RS Series through FT300 Series) also applies to certain variations of these models for which National Sanitation Foundation Listing is authorized. Such variations are limited to the providing of soiled dish (loading) or clean (unloading) sections of non-standard length. The pump section(s), final rinse section conveyor width, and maximum conveyor speed must remain unchanged.

④ All "FR" models incorporate the complete "FastRack" including dish tables, scrapping system, disposal system and complete conveyorization for racks. All components meet the requirements of applicable NSF Standards or Criteria.

⑤ These machines have been tested and listed at both 7.4 ft. per minute and 10 ft. per minute.

① These conveyor type machines may be furnished with FWPW (Fresh Water Pre-Wash) or RPW (Recirculating Pre-Wash) built integral with the machines as accessory equipment.

② Make-up water is provided from final rinse source of supply. Sizing of water heaters should be based upon this additional demand. (Not to exceed 2 GPM.)

③ Can be furnished with a blower-dryer section. (Suffix BD).

① Suffix letters on standard model numbers indicate the following:
STPC Models with "HS" Suffix have built-in fresh water scrappers.
STPC Models with "PS" Suffix have built-in power scrappers.
STPC Models with "D" Suffix have built-in forced air dryers.
C - Corner Models A - Automatic F - Automatic Fill V - Vented Hood

② Make-up water for wash tank is provided from final rinse source of supply. Sizing of water heaters should be based upon this additional demand. (Not to exceed 2GPM).

③ Engineering data pertaining to rackless conveyor machines (Models STPC 10 through STPCW-26D) also applies to certain variations of these models for which National Sanitation Foundation Listing is authorized. Such variations are limited to the providing of soiled dish (loading) or clean dish (unloading) sections of non-standard length. The pump section(s), final rinse section, conveyor width and maximum conveyor speed must remain unchanged.

Multiple Tank Rackless Conveyor	HP-3** ①② Series ③	14250	27.5"	42	42	32	280	280	230	7	420	10			

① Asterisks in model numbers of CP Series and HP Series represent two digits which denote the length of the machine in feet and range from 15 to 22.

② Engineering data pertaining to rackless conveyor machines (Models CP Series and HP Series) also applies to certain variations of these models for which National Sanitation Foundation Listing is authorized. Such variations are limited to the providing of soiled dish (loading) or clean dish (unloading) sections of non-standard length. The pump section(s), final rinse section, conveyor speed must remain unchanged.

③ Data pertaining to pre-wash sections of CP & HP Series machines applies only when pumped pre-wash sections are specified.

④ Make-up water for wash tank is provided from final rinse source of supply. Sizing of water heaters should be based upon this additional demand. (Not to exceed 2 GPM)

Only basic model numbers are Listed. Modifications of basic Listed units indicated by prefixed or suffixed letters or numbers are considered to be included in this Listing.

Remote reach-in and prefabricated walk-in refrigerators and storage freezers are NSF Listed ONLY when the BTU ratings of the compressor and cooling unit used, are in conformance with the recommendations of the manufacturer of the refrigerators or freezers. The minimum recommended BTU ratings for the compressor and cooling unit are required to be indicated on a permanent label, or plate, attached to each remote reach-in or prefabricated walk-in refrigerator and storage freezer by the manufacturer thereof.

Above Units with one of the following suffixes:
R - Remote unit but supplied with evaporator
SC - Self contained unit
X - No refrigeration components

Only basic model numbers are Listed. Modifications of basic Listed units indicated by prefixed or suffixed letters or numbers are considered to be included in this Listing.

Remote reach-in and prefabricated walk-in refrigerators and storage freezers are NSF Listed ONLY when the BTU ratings of the compressor and cooling unit used, are in conformance with the recommendations of the manufacturer of the refrigerators or freezers. The minimum recommended BTU ratings for the compressor and cooling unit are required to be indicated on a permanent label, or plate, attached to each remote reach-in or prefabricated walk-in refrigerator and storage freezer by the manufacturer thereof.
